

L-Carnitine Plus

GREEN COFFEE EXTRACT

L-CARNITINE is a naturally occurring amino acid which plays a vital role in the metabolism of fat. It functions as a transporter of fatty acids into the mitochondria, the metabolic furnace of the cell. It has been established that an adequate supply of L-carnitine is necessary for the maintenance of good health and energy. L-carnitine transports long-chain fatty acids across the mitochondrial membrane to be metabolized. L-carnitine aids in the release of stored body fat, called triglycerides, into the bloodstream for energy.⁽¹⁾

GREEN COFFEE EXTRACT (GCE) – GCE is extracted from coffee beans that have not yet been roasted. There are two key compounds in unroasted coffee beans: caffeic acid and chlorogenic acid. The chlorogenic acid and caffeic acid in GCE have been clinically studied to have several beneficial effects on weight loss. Studies suggest that GCE is an effective nutraceutical in reducing weight in adults for the following reasons: Inhibition of fatty acid synthase, increased fat oxidation and increased metabolism.⁽¹⁾
