**REACTION™**

A whole new  
dimension in cellulite  
and skin tightening  
treatment

## Reaction™ - your way to treat cellulite

**Have you noticed that orange peel texture on your tummy, thighs, underarms and buttocks? You're not alone!**

Cellulite occurs in more than 80% of women over the age of 20. Even average and underweight people have cellulite and the condition is usually triggered with the onset of puberty.

Reaction™ is designed to treat those stubborn cellulite marks at the core while strengthening existing collagen fibers, rendering a more toned and firmer appearance to your skin.

## How long does the treatment take?

Each treatment session lasts approximately 20-30 minutes.\*

## How many sessions do I need?

A recommended treatment course consists of 4-8 sessions, depending on the skin type and physical characteristics.\*

## Will the cellulite disappear completely?

The treatments are effective and results are visible from the first treatment. Following completion of the treatment course, your aesthetician will be able to tailor suitable maintenance sessions to target your unique needs.

\* Treatment sessions required and results may vary from person to person.

## What does the treatment feel like?

The treatment is simple and comfortable and resembles a deep tissue massage combined with suctioning of the skin. Glycerin oil is applied on the treatment area allowing the applicator to easily travel along the skin in slow, concentrated rotations.

## Is the treatment safe?

Yes. Reaction™ is a safe, effective and non-invasive treatment with no adverse effects involved.

## How does it work?

Reaction™ combines two mechanisms of RF energy and vacuum therapy that work with the body's natural regeneration processes. Going deep under the skin, the RF energy targets enlarged fat pockets to reduce fat cell volume and increase the metabolism while the vacuum manipulation increases local blood circulation and lymphatic drainage.

## Skin Tightening

**If you've looked closely in the mirror recently, you probably came across a new wrinkle or noticed 'excess baggage' around the eyes.**

**Think you can't defy the laws of gravity?  
Think again!**

Reaction™'s breakthrough skin tightening treatments instantly contract tissue fibers for immediate smoothing and plumping results. Collagen fibers are also strengthened for long-term tightening, rendering smoother, tighter skin.

## What is a skin tightening treatment?

The skin tightening treatment works to strengthen existing collagen fibers that have weakened over time due to aging and various forms of stress. Bi-polar RF energy heats the dermis and stimulates collagen synthesis to strengthen existing collagen fibers for improvement in skin laxity, sagginess and texture. Immediate contraction of tissue fibers results in a smoother and tighter appearance of the skin.

## What areas can be treated?

The skin tightening treatments are suitable for the face such as the jowls, cheeks, brows and the sensitive zones of the eyes and forehead as well as the neck, décolleté and underarm.

## How long does the treatment take?

Each treatment session lasts approximately 15 minutes.\*

## Is it safe?

Yes, the treatment is safe, effective and has no adverse effects. The treatment involves a unique skin cooling mechanism along with an applied cooling gel for maximum comfort.

## How many treatments must I have?

A treatment course of 3-5 sessions is recommended for optimal results.\*
